EDUCATION

University of Washington - Seattle | Seattle, WA

Expected Graduation June 2027

B.S. in Computer Science, B.A. in French | GPA: 3.6

- **Courses:** Machine Learning, Computer Security, Foundations of Computing I & II, Data Structures and Parallelism, Software Design and Implementation, Hardware and Software Interface, System and Software Tools, UW Calculus
- **Honors:** Dean's List (2023, 2024, 2025), National Center for Women and Information Technology Award (2021)

WORK EXPERIENCE

Sierra Nevada Corporation | Hood River, OR

Jun. 2025 - Aug. 2025

Software Engineer Intern

- Engineered software deployments to enhance flight performance, autonomy, and system reliability through component analysis, optimization, and balancing cross-functional input for unmanned aircraft systems (UAS).
- Developed threshold-based monitoring and integrated caution logic for the power distribution unit using **C++** and **JavaScript**, detecting previously unknown power anomalies and significantly improving system safety and reliability.
- Implemented a new mission-computer GUI in **React** by designing a distributed software architecture, improving operator usability, software stability, and in-flight efficiency.

Bluco AI @ Station F | Paris, France

Feb. 2025 - Apr. 2025

Startup Software Engineering Intern

- At the world's largest startup campus, applied **React**, **Next.js** and **SQL** to develop and implement an operations dashboard displaying live application data, key metrics, and insights to help recruiters source candidates and drive real-time quality.
- Optimized **SQL queries** and **API calls** to improve backend performance and reduce database latency.
- Spearheaded product features by **testing UI/UX enhancements**, boosting overall recruiter efficiency and user experience.

Coding With Kids | Seattle, WA

Apr. 2024 - Sep. 2024

Programming Instructor

- Created education modules and facilitated **hands-on learning** for middle school students for fundamental programming concepts including loops, conditionals, variables and functional decomposition in **Scratch**, **Java**, **Python**, **HTML** and **CSS**.
- Provided debugging support and technical guidance, leveraging strong interpersonal skills to communicate complex concepts; consistently recognized as a top-rated instructor by students and parents with a **perfect 5.0 review score**.

SELECTED PROGRAMMING EXPERIENCE

Undergraduate Teaching Assistant | Paul G. Allen School of Computer Science and Engineering

Sep. 2025 - Present

- Collaborated with instructors to lesson plan, grade, and improve course materials for direct admit seminar.
- Mentored students on academic planning, professional development, and navigating the Allen School.

buildHER Executive Board Member | cseed (UW Entrepreneurship Club)

Sep. 2025 - Present

- Lead program design and execution for the buildHER organization, a women-focused tech initiative under cseed, driving inclusive community-building through mini-build events, professional development workshops, and mentorship panels.
- Fostered engagement and retention by bridging pathways throughout the Allen School and broader tech opportunities.

Undergraduate Research | Sensor Energy Automation Laboratory (SEAL) @ UW

Sep. 2024 - Feb. 2025

- Participated in the SEAL research lab as a member of the Artificial Intelligence team focused on writing scripts, software and media that aids groups in the lab in projects relating to defense, tech, avionics and medicine.
- Completed tasks in projects related to debugging, automation and the SEAL bot, an artificial intelligence solution for organizational management. Provided regular updates on these tasks during weekly meetings with group members.
